

Lateral screen support

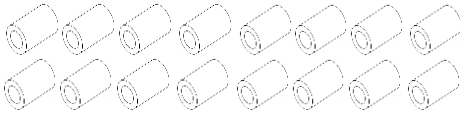

Quick Start Guide – Rev 0.0 May 2025

PACKING LIST

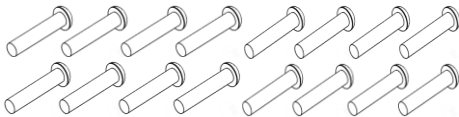

2u- Main support

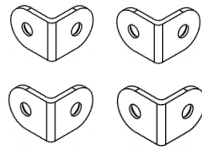

16u- Spacer

16u- black bolts M4x20

4u- 90-degree bracket

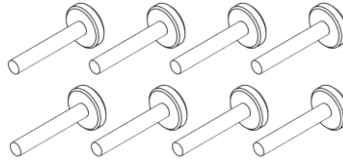

4u- black bolts M4x6

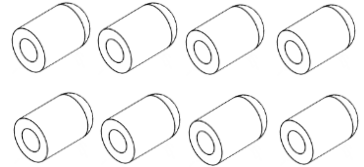

4u- Cord grip

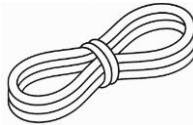

8u- Knurl bolt M4x25

8u- Rubber end cap

1.5 m (59 in) - Elastic cord

ASSEMBLE THE COMPLETE SET

Collect all the packing list items, following the reference images provided. Pay attention to the fact that the two assemblies are symmetrical, so they should not be mounted identically.

You need to cut 2 elastic cords with a length equal to $(\text{monitor width} - 50) \times 0.85$. For example: if your monitor is 400 mm wide, then $400 - 50 = 350 \times 0.85 = 297.5$ mm.

rotAIR type-1

rotAIR type-2

Elastic cord

If your monitor is thinner than 10 mm, it's better to skip the spacers.

In that case, instead of using the M4x20 screws, you should use the M4x8 screws (not illustrated) included with your rotAIR unit.

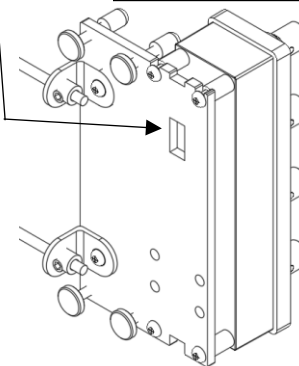

Note that the M4x6 screws go here.

And the M4x20 screws go here.

rotAIR type-2

This opening must be aligned with the USB connector.

rotAIR type-1

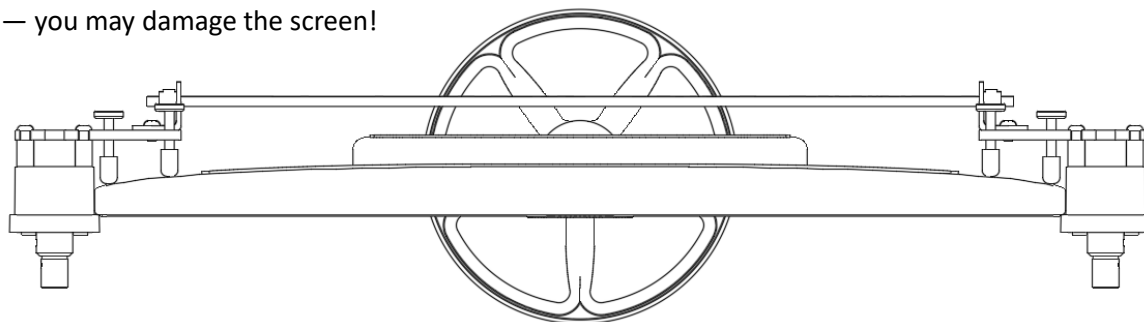

Final step: Stretch the elastic cords and place the rotAIR units on both sides of the monitor at your desired height. Then tighten the 8 Knurl bolts M4x25:

-Outer bolts: lock the rotAIRs in place.

-Inner bolts: align the rotAIRs or apply a slight tilt for better pilot viewing angle.

⚠ Warning: Do not overtighten — you may damage the screen!

rotAIR + pulsAIR CONFIGURATION

*When using rotAIR and pulsAIR together, the lateral supports can be assembled as shown below.
Use the two reference views to mount the supports symmetrically on each side of the monitor.*
